RESUMEN

En el actual mundo globalizado, en el auge y crecimiento de nuestro país, dentro de ese crecimiento está el sector financiero, en el cual la población colombiana ha encontrado en el entorno diferentes formas de ahorro e inversión con una rentabilidad moderada, riesgo bajo, calidad e innovación en los productos financieros. La búsqueda de estos mecanismos de inversión llevan recurrir directamente a diversos entes financieros, como son: bancos,

comisionistas de bolsa, corporaciones financieras e inversionistas a nivel general; estos son los diferentes productos financieros que se encuentra en crecimiento, como son las acciones, tes, bonos y carteras colectivas.

Por tanto, en el presente trabajo, la metodología implementada para llevar a cabo el desarrollo del mismo es el método de monografías, la cual se basa en hechos históricos, información actual y consecuencias que trajo para el mercado de valores la situación presentada por Interbolsa. Para ello, se hace un recuento histórico con respecto a las generalidades del mercado de capitales con relación al crecimiento constante de la comisionista Interbolsa y su influencia en el índice Colcap; haciendo énfasis, ante todo, en la confianza y en él como Interbolsa llegó a ser la primera comisionista de valores de Colombia. Por consiguiente, es necesario proceder con un análisis macroeconómico y financiero, con el fin de conocer la situación actual del mercado de capitales en Colombia, y su posible desarrollo referente al suceso presentado por la liquidez de la comisionista de bolsa Interbolsa.

Ahora, es de considerar que el mercado de capitales en Colombia posee algunos vacíos en relación a lo que cuesta mitigar el riesgo, a diferencia de las bolsas latinoamericanas en la cuales existe consolidación y planes de choque efectivos para contrarrestar alguna situación inusual, entendiendo que en algún momento se pueda presentar o se presente, como el caso en Colombia de la firma Interbolsa, la cual se trata de abordar de una manera profunda.

Por último, es de señalar que para el desarrollo del presente proyecto, se presenta la fluctuación de manera cuantitativa en el mercado de valores en Colombia respecto a la crisis o liquidación de la comisionista Interbolsa antes y después de su momento coyuntural, esto servirá como aporte de formación y aprendizaje a los estudiantes o inversionistas en observación de los mercados de capitales, y de la forma en cómo esto puede afectar a su capital expuesto.

INTRODUCCIÓN

En el actual mundo globalizado, en el auge y crecimiento de nuestro país, dentro de ese crecimiento está el sector financiero, en el cual la población colombiana ha encontrado en el entorno diferentes formas de ahorro e inversión con una rentabilidad moderada, riesgo bajo, calidad e innovación en los productos financieros. La búsqueda de estos mecanismos de inversión llevan recurrir directamente a diversos entes financieros, como son: bancos, comisionistas de bolsa, corporaciones financieras e inversionistas a nivel general; estos son los diferentes productos financieros que se encuentra en crecimiento, como son las acciones, tes, bonos y carteras colectivas.

Por tanto, en el presente trabajo, la metodología implementada para llevar a cabo el desarrollo del mismo es el método de monografías, la cual se basa en hechos históricos, información actual y consecuencias que trajo para el mercado de valores la situación presentada por Interbolsa. Para ello, se hace un recuento histórico con respecto a las generalidades del mercado de capitales con relación al crecimiento constante de la comisionista Interbolsa y su influencia en el índice Colcap; haciendo énfasis, ante todo, en la confianza y en él como Interbolsa llegó a ser la primera comisionista de valores de Colombia. Por consiguiente, es necesario proceder con un análisis macroeconómico y financiero, con el fin de conocer la situación actual del mercado de capitales en Colombia, y su posible desarrollo referente al suceso presentado por la liquidez de la comisionista de bolsa Interbolsa.

Ahora, es de considerar que el mercado de capitales en Colombia posee algunos vacíos en relación a lo que cuesta mitigar el riesgo, a diferencia de las bolsas latinoamericanas en la cuales existe consolidación y planes de choque efectivos para contrarrestar alguna situación inusual, entendiendo que en algún momento se pueda

presentar o se presente, como el caso en Colombia de la firma Interbolsa, la cual se trata de abordar de una manera profunda.

Por último, es de señalar que para el desarrollo del presente proyecto, se presenta la fluctuación de manera cuantitativa en el mercado de valores en Colombia respecto a la crisis o liquidación de la comisionista Interbolsa antes y después de su momento coyuntural, esto servirá como aporte de formación y aprendizaje a los estudiantes o inversionistas en observación de los mercados de capitales, y de la forma en cómo esto puede afectar a su capital expuesto.

1. TÍTULO

Impacto en el índice Colcap del mercado de valores Colombiano por efecto del evento de la crisis de Interbolsa S.A.

2. FORMULACION DEL PROBLEMA

Los inversionistas colombianos identifican una gran posibilidad de generar mayores rentabilidades por medio de acciones, donde existe la intervención de comisionistas de bolsa en las cuales depositan capitales para negociar en el mercado estandarizado.

Interbolsa es una empresa colombiana que empezó sus operaciones hace 22 años, nace en Medellín como una pequeña firma de valores, pero cuando el economista Juan Carlos Ortiz compró en el año 1997, la mitad de dicha empresa empieza a invertir en TES (Títulos de deuda pública), desde donde se empezaron a dar grandes rendimientos; por

consiguiente, inscribe su acción en la bolsa de valores en 1999, convirtiéndose en una de las instituciones financieras referentes al mercado bursátil colombiano. El grupo Interbolsa lo conformaban antes de su liquidación, comisionista de bolsa, administradora de inversión, seguros y otros.

Así que, se analizará desde la volatilidad del mercado el índice Colcap, al igual que se medirá el volumen y el rendimiento, que tuvo dicho indicador en el momento de la crisis con respecto al activo financiero de acciones.

A partir de lo anterior surge la pregunta: ¿Cómo la situación de Interbolsa afectó la variación del precio y volumen del indicador Colcap en el mercado de valores colombiano?

3. JUSTIFICACION

El siguiente trabajo pretende dar a conocer el impacto que tuvo la liquidación en el mercado de valores colombiano, haciendo énfasis en el indicador Colcap y la forma de cómo la comisionista Interbolsa realizó un mal manejo sobre la acción de Fabricato, haciendo elevar su precio y luego por efecto de ello, hay una serie de negociaciones donde se incumple el pago.

Según lo anterior, se dará a conocer como afectó la situación de Interbolsa el índice Colcap, de este modo, los estudiantes de la Universidad de Medellín logren conocer, profundizar y difundir los efectos de liquidación de una comisionista de bolsa sobre un índice en el mercado de valores colombiano; además de profundizar en cómo una comisionista con pobre salud financiera puede afectar índices, y en general el mercado de capitales en Colombia.

Por otra parte, los instrumentos derivados son una buena fuente de cobertura y protección de los capitales involucrados por los inversionistas, es por esto que sus efectos pueden ser observados en cada uno de los índices que se manejan en el mercado colombiano, para determinar así como un inversionista puede tener menor exposición al riesgo, que esto en su momento se pueda implementar de manera adecuada y hacer que el impacto sea mucho menor al generado en el presente.

Para la cultura colombiana, el uso de estos instrumentos de opciones financieras, da una gran oportunidad para invertir y tener mayores rentabilidades según el riesgo de los inversionistas. Es por esto que, se pretende con la solución de dicho problema, también generar conciencia y protección de la inversión de cada persona o entidad que requiera comprometer su capital a corto o largo plazo, con el fin que una situación específica no altere las negociaciones con cierto instrumento ofrecido en el mercado de valores.

4. OBJETIVOS

4.1 Objetivo General

Explicar cómo la situación de Interbolsa afectó el índice Colcap en términos de variación, precio y volumen en el mercado, para mostrar resultados estadísticos que revelen la situación histórica y actual del índice.

4.2. Objetivos Específicos

- Analizar las variaciones del índice Colcap y su correlación con otros índices en Latinoamérica de los periodos antes y después de la liquidación de Interbolsa.

- Determinar las características de las comisionistas y como éstas son factor importante en los mercados de capitales.

- Observar mediante herramientas estadísticas y financieras cómo fue el impacto de la crisis de Interbolsa en el indicador Colcap.

5. MARCO TEÓRICO

5.1 Antecedentes

Para el trabajo de grado es importante tener un breve seguimiento de cómo surgió el mercado de valores en el mundo y en Colombia por medio de las bolsas de valores, conociendo los diferentes entes que intervienen en el mercado de valores, haciendo énfasis en las comisionistas de bolsa Interbolsa, la cual debido a su liquidación trajo implicaciones en los indicadores en la bolsa de valores; a su vez, también se debe mencionar cómo se originó el índice Colcap, el cual es foco fundamental para el estudio de la situación de Interbolsa y de su afectación directa o indirecta para el mercado de valores.

Al detallar la situación de Interbolsa antes y después del momento en que se presentó la liquidación y se revelaron una serie de sucesos en los que varios frentes fueron involucrados, los administrativos, fiscales, regulatorios, financieros y de mercado, es de mencionar que la acción de Fabricato fue un detonante importante para que fuera intervenido por la Superfinanciera y posteriormente la terminación definitiva de la firma; esta acción en el mercado de valores durante el suceso estaba sobrevalorada, y hacía que el índice Colcap se mostrara como un instrumento atractivo de generación de rentabilidad para los inversionistas. Es por esto que, es importante relacionar a la bolsa colombiana con otras de Latinoamérica, y en especial observar el comportamiento de los índices, haciendo énfasis importante en si tuvo una relación directa los índices de otros países latinoamericanos y el Colcap.

A su vez, se debe tener presente que para realizar el análisis de lo sucedido con el caso Interbolsa, se deben abordar herramientas estadísticas y financieras, como son los: diagramas de dispersión, histograma, análisis de estados de resultados de Interbolsa. De

este modo, se logra determinar de forma cuantitativa con las herramientas implementadas por qué se da un riesgo de mercado alto, el cual hizo que esta comisionista fuera intervenida y posteriormente liquidada, eso sí, sin dejar a un lado un tema que es fundamental, como es el riesgo de liquidez en el que se encontraba dicha coyuntura.

Además, es importante tener presente que:

En un mundo cambiante, en donde la civilización ha buscado el crecimiento y desarrollo constante en el campo de la negociación de activos financieros y commodities, surge la bolsa de valores como institución a finales del siglo XV, en las ferias medievales en las que ejercían títulos de valores mobiliarios en Europa occidental. Sobre el término “Bolsa”, es de mencionar que apareció en Brujas, Bélgica, concretamente en la familia de banqueros Van der Bursen, en cuyo palacio se organizó un mercado de títulos valores. Es así como, en el transcurso de la historia se fueron creando bolsa de valores a nivel mundial, en 1460 se creó la bolsa de Amberes, la cual fue la primera bolsa moderna. En Londres se creó la bolsa de valores en 1570, Francia en la ciudad de Lyon en 1595 y en 1792 inició la primera bolsa de valores en el continente americano en Nueva York (Brull, 2007).

Reseñar sobre la historia de la bolsa en el mundo, ya que uno de los objetivos es mostrar cómo pueden tener una relación directa las bolsas de latinoamericana y otras latitudes, además de evidenciar cómo un momento coyuntural o una situación que afecte los mercados puede repercutir en variaciones de precio, volumen y negociaciones de instrumentos financieros, con que cada bolsa o en específico cada comisionista de bolsa transe en el mercado local o global de valores.

Respecto a los antecedentes históricos del sistema financiero colombiano, se halla que éste se remonta siglos atrás, “cuando los chibchas o muiscas intercambiaban productos

con los habitantes de otras regiones, su moneda era tejuelos de oro. Por su parte, en la época de la conquista circularon monedas españolas, cada una equivalía a ocho reales; del mismo modo, circulaban pesetas, medios reales y cuartillos. También se manejaba la macuquina o moneda de cruz proveniente de Perú y México” (Gaviria, 1999). Es así como se encuentra que a lo largo de la historia de la humanidad, y específicamente en América, han existido modos financieros, los cuales han cambiado con el transcurso del tiempo.

A lo anterior, se le suma:

A mediados de 1974 se instaló un nuevo gobierno en Colombia, el cual inició un proceso de reformas para liberar el mercado y depender menos del crédito de los recursos del Banco de la República; se optó por elevar las tasas de interés de depósito de ahorro, lo mismo se hizo con los bonos que circulaban en el mercado. El gobierno no permitió una libertad en el manejo de tasas de interés pasivas y por el contrario las elevó para evitar su dispersión. Por otro lado, se restringió el acceso al crédito del Banco de la República a los bancos comerciales. Se elevaron las tasas de descuento y se hicieron más severas las sanciones por desencajes, esto con el fin de eliminar una de las fuentes de inestabilidad monetaria de Colombia. En 1977 se impuso un encaje marginal del 100% que buscaba eliminar la rápida monetización de las reservas. (Murillo, 2009).

Cabe anotar, que en Colombia la evolución del mercado de capitales ha estado ligada al desarrollo de la economía del país. Por tanto, “El proceso de industrialización ocurrido en el país, en las primeras dos décadas del siglo XX, ha sido fruto del desarrollo del sector cafetero, lo cual intensificó el progreso en la tecnificación de sectores importantes para la economía colombiana, movilizand o una corriente de capitales de gran importancia en regiones como Antioquia y Cundinamarca” (Mercados Capitalistas en Colombia, 2013). Todo esto, deja ver que en el país se encuentra un movimiento financiero alto, que ha tratado de darse desde décadas anteriores lo cual ha permitido avances, aciertos y que haya un mayor manejo a lo financiero en determinados departamentos, como lo es

Antioquia, lo cual se ve reflejado con Interbolsa, que surge de este departamento, que alcanza grandes expectativas y en su momento marcó un hito dentro del campo económico del país.

Ahora, es fundamental abordar el concepto sistema financiero, el cual tiene un rol fundamental en la economía porque funciona como medio de gestión de riesgos, provee un sistema de pagos y permite asignar un precio a los recursos financieros.

El sistema financiero es el conjunto de instituciones y operaciones a través de las cuales se transfieren recursos de los individuos, con recursos disponibles para depositar o invertir (sector superavitario) a las empresas que los requieren para sus proyectos (sector deficitario). El sistema financiero comprende el mercado bancario, también llamado intermediado, y el mercado de valores, también llamado desintermediado. En el primero, la transferencia de recursos de los sectores superavitarios a los sectores deficitarios tiene lugar a través de entidades que actúan como intermediarios, que, separada e independientemente, se relacionan con los depositantes y con quienes requieren financiación. Mientras que, en el segundo, la transferencia de recursos de sectores superavitarios a sectores deficitarios tiene lugar a través de una relación directa entre ambos sectores mediante la emisión de valores. En particular, en este mercado no existen intermediarios propiamente dichos (es decir, entidades que se relacionen de forma completamente independiente entre sectores superavitarios y deficitarios), sino agentes que ponen en contacto a los emisores e inversionistas (intermediarios del mercado de valores) (Bolsa de Valores de Colombia, Colombia Capital & Brigart & Urrutia, 2014).

Al hacer referencia a la estructura y composición del sistema financiero a nivel mundial y más aún en Colombia es de gran importancia para este trabajo, ya que aquí se pretende evaluar la gran afectación que tuvo una liquidación de una firma comisionista de bolsa en el mercado financiero y de valores, y cómo la economía en Colombia pudo ser afectada al haberse disminuido, a causa del mal manejo administrativo de una firma que se

consideraba como una columna vertebral en el mercado colombiano, que tenía un gran peso de importancia, de alrededor de un 40% del total.

5.1.1 Índices de la Bolsa de valores de Colombia

Sobre la Bolsa de Valores de Colombia, se encuentra que ésta:

Cuenta con tres índices generales: IGBC, Colcap y COL 20, los últimos dos índices nacieron en diciembre de 2007 con el objetivo de medir el comportamiento del mercado desde otra perspectiva. El índice Colcap es un indicador de la capitalización bursátil ajustada de cada compañía determinando su nivel de ponderación. El índice COL20 es un indicador, donde el nivel de liquidez de cada compañía determina su ponderación (Bolsa de Valores de Colombia, 2008).

De otra parte, se debe mencionar que existe una réplica del índice COLCAP llamado ICOLCAP, cuya función principal es tomar activos que se tranzan en bolsa dentro del mercado regulado y analizar el comportamiento del índice.

El indicador Colcap fue creado en el año 2007 por la Bolsa de Valores de Colombia, la cual tiene como objetivo:

La variación de los precios de las acciones, en el mercado accionario y reemplazar de formar progresiva el IGBC. El valor base con el que inició el Colcap en la apertura de la rueda del 15 de enero de 2008 fue de 1.000 puntos, es un índice de capitalización que

refleja las variaciones de los precios de las 20 acciones más líquidas de la Bolsa de Valores de Colombia (BVC), donde la participación de cada acción en el índice está determinada por el correspondiente valor de la capitalización bursátil ajustada (flotante de la compañía multiplicada por el último precio). Cada empresa se determina por su capitalización bursátil ajustada. (Bolsa de Valores de Colombia, 2013)

Este indicador consta de 20 acciones de mayor volumen y captación de la bolsa de valores de Colombia, en la cual cada acción del índice corresponde al valor de capitalización bursátil ajustada; este indicador fue creado para tener mayor liquidación y recomposición de las acciones en la bolsa de valores y puede mostrar alguna correlación existente entre índices COLCAP y IGBC; de modo que, para este estudio es importante reconocerlo para determinar la incidencia de la situación presentada por Interbolsa y su afectación en el mercado colombiano.

Por su parte, este indicador hace una selección de rebalanceo en la que consta la participación de cada acción en la canasta de las 20 acciones:

Esto se da por los cambios de la capitalización bursátil ajustada, la clasificación de las acciones se da en los meses enero, abril y julio, en donde por medio del rebalanceo pueden salir y entrar acciones al índice, éste último debe cumplir con cinco características indispensables, además debe reflejar para un perfil de riesgo determinado, el universo de oportunidades disponibles para los inversionistas. Entre más completo un índice, más eficientemente representa el universo de activos a seguir. Un índice completo debe proveer la mayor diversificación. Por último, todos los índices requieren un rebalanceo con el fin de mantener la canasta alineada con la metodología (Bolsa de Valores de Colombia, 2008, ¿Qué es un índice bursátil?).

5.1.2 Las sociedades comisionistas de bolsa

Sobre esto se encuentra:

Las comisionistas de bolsa en el estatuto del mercado público de valores pueden ejecutar operaciones en el mercado primario y secundario, son las únicas responsables ante la bolsa de valores, por medio de las sociedades comisionistas de bolsa los inversionistas tienen un fácil acceso a múltiples activos y mercados, en donde ellos puedan diversificar el riesgo y tener mayor posibilidades de inversiones. Actualmente hay 27 Sociedades Comisionistas activas, las cuales se clasifican en bancarizadas, si su dueño es un banco, y tradicionales, si son personas naturales o un grupo familiar (Bolsa de Valores de Colombia, 2008, ¿Qué es una comisionista de bolsa?).

Para llevar a cabo su actividad, las sociedades comisionistas cuentan con profesionales especializados en el mercado (los comisionistas):

Que realizan en nombre de sus clientes negociaciones de compraventa de títulos. Este servicio se ejecuta bajo lo que se denomina "contrato de comisión". Adicionalmente, es de tener presente que las sociedades y sus comisionistas están bajo el control y vigilancia de la Superintendencia Financiera y el Autorregulador del Mercado de Valores. Todas las Sociedades Comisionistas miembros de la Bolsa de Valores de Colombia los cobijan unos principios generales formulados en el Código de Conducta de las Sociedades Comisionistas miembros de la BVC (Bolsa de Valores de Colombia, 2008, ¿Qué es una comisionista de bolsa?).

Con lo anterior, se encuentra que las sociedades comisionistas son un factor importante en el mercado de valores, la Bolsa de Valores (2008) sostiene que, dado a que son las únicas que pueden participar en el mercado de valores de Colombia haciendo más eficiente y líquidas las negociaciones de los activos financieros. La sociedad comisionista Interbolsa fue en sí unas de las más grandes del país, manejaba el 30% de las operaciones en Colombia, dado a su poder de negociación, pero por la falta de lealtad actúa en conflictos de interés que se benefician las compañía y los socios, pues tal como no informar a los órganos de administración, no hacer vigilancia del cumplimiento de las directrices del mercado público de valores; por ejemplo, el 1 de noviembre del 2012 incumplió el pago de una de sus obligaciones con la entidad financiera BBVA, entró en liquidación y al día siguiente sus operaciones cerraron en la bolsa de valores de Colombia. Todo esto conlleva en repensar el control y seguridad que tiene el ente de mercado de valores con las sociedades comisionistas de bolsa, puesto que pudo haber evitado dicha reliquidación y los malos manejos de las operaciones (acciones de Fabricato).

Desde la perspectiva de los comisionistas, la diversidad de sus operaciones no solo se determina la estructura de sus ingresos, sino también el nivel de competencia en el mercado (el número de participantes aumenta debido al interés de incursionar en nuevos negocios), la eficiencia y una mejor relación rentabilidad-riesgo asociada al hecho de que se desarrollen instrumentos para la cobertura del mismo.

De modo que, “en la orientación de las operaciones de estas firmas el desarrollo y las condiciones del mismo mercado juegan un papel esencial. La diversidad de los negocios de la concentración del mercado, la volatilidad y la profundidad; pero también, está determinada por el marco regulatorio, ya que éste define las posibilidades de negocios y la seguridad y garantía de los mismos, a la vez que brinda un apoyo al intermediario en la información y procedimientos de las operaciones” (Arbeláez, Zuluaga & Guerra, 2002). Por

lo que, es oportuno observar cómo las comisionistas de bolsa, en especial Interbolsa mostraba un nivel de apalancamiento grande el cual no debería ser mayor a su patrimonio técnico, pues esto debilita la salud financiera de las empresas y a futuro lleva a que existan liquidaciones o fusiones para su rescate, sin dejar a un lado la reglamentación que rige cada una de ellas.

Según el análisis de la situación presentada por Interbolsa, se puede concluir que su liquidación no solo se debió a problemas administrativos y de no intervención del agente regulador, también es importante mencionar que se tuvo graves problemas de liquidez, lo cual condujo al incumplimiento de la contraparte por las obligaciones u operaciones adquiridas que tenían un vencimiento próximo. Es por ello que, se debe analizar la situación de los principales indicadores a nivel internacional, como el S&P500, fundamentales para hallar una correlación a los índices nacionales COLCAP, ya que son referencia para tomar decisiones en el mercado y de alguna manera anticiparse a los hechos, tanto así que puede llevar a dar una conclusión profunda de su afectación a la situación Interbolsa y como este golpeó los mercados financieros o desestabilizó la economía.

El índice bursátil S&P 500, se compone de las 500 empresas más grandes de Estados Unidos y se pondera de acuerdo a la capitalización de mercado de cada una de las empresas. Éste es elaborado por la agencia de calificación de riesgo de acciones y bonos, cuyos especialistas son los máximos conocedores del mercado de bolsa y de la situación de riesgo de las compañías. Este índice expresa mejor la situación real del mercado accionario y de bonos, por lo que es más sensible que el Dow Jones Industrial Average y el Nasdaq 100.

A su vez, es importante dar una reseña de los índices a nivel mundial y más como referente de Estados Unidos, como lo son S&P500, de este modo poder establecer una correlación con índices a nivel nacional y determinar cómo es su manejo en el mercado de

valores interno, si es igual de eficiente a los referentes; de allí, se puede determinar si estos índices afectan en la misma proporción la caída de una de las empresas que lo componen, como en el caso de Fabricato, antes de la disolución de Interbolsa.

Gráfica 1. Comportamiento acción Fabricato durante 5 años

Tomado: Bloomberg, 2013.

En esta gráfica se observa el comportamiento de la acción de Fabricato, que fue el principal factor que detonó la intervención de la Superintendencia Financiera para la previa liquidación de Interbolsa, con respecto a la transacción realizada por REPOS, lo que hizo que su precio se inflara y luego tuviera una caída por el impago de la obligación, para así llegar a la liquidación y pérdida de la confianza de los inversionistas. Aquí se ve que su precio spot tuvo un alza demasiado agresiva, debido a los manejos internos de algunos

corredores que colocaron una cumbre de precio de una acción que no representaba un valor suficiente en el mercado, en otras palabras un precio fantasma o irreal.

Gráfica 2. Comparativo índice Colcap vs sp&500

Tomado: Bloomberg, 2013.

En esta gráfica se evidencia la correlación no existente entre el índice Colcap y el índice S&P500, por lo que el efecto de una caída en los precio de las compañías que componen el índice en Estados Unidos no replican de forma similar en los índices de la bolsa en Colombia, además se encuentra que su relación es indirecta y cuando los precios

de un índice americano S&P500 tienden al alza en el mercado colombiano, su índice COLCAP a veces tiene una variación importante en su precio y volumen, aunque en algunas puntas alcanzan su equilibrio y tienden a encontrar su precio óptimo de mercado.

5.2 Bases teóricas

Antes de analizar o planear los modelos financieros acordes con el estudio de la situación de Interbolsa en el índice Colcap, es necesario dar una pequeña referencia con respecto a los tipos de riesgos de inversión y su incidencia en los mercados; para ello, se hace referencia a algunos de ellos y quizá los más importantes para este tema son:

Riesgo de mercado: El riesgo de mercado hace referencia a la probabilidad de que el valor de una cartera, ya sea de inversión o de negocio, se reduzca debido al cambio desfavorable en el valor de los llamados factores de riesgo de mercado. Los cuatro factores estándar del mercado son: Riesgo de tipos de interés: riesgo asociado al cambio en contra de los tipos de interés. Riesgo cambiario (o riesgo divisa): es el riesgo asociado a los cambios en el tipo de cambio en el mercado de divisas. Riesgo de crédito: El riesgo de crédito deriva de la posibilidad de que una de las partes de un contrato financiero no realice los pagos de acuerdo a lo estipulado en el contrato. Las pérdidas que se pueden sufrir engloban pérdida de principales, pérdida de intereses, disminución del flujo de caja o derivado del aumento de gastos de recaudación. Por último, Riesgo de liquidez: está asociado a que, aun disponiendo de los activos y la voluntad de comerciar con ellos, no se pueda efectuar la compra/venta de los mismos, o no se pueda realizar los suficientemente rápido y al precio adecuado, ya sea para evitar una pérdida o para obtener un beneficio (EFXTO, 2013).

Riesgo de contraparte: es similar a otras formas de riesgo de crédito en el cual la pérdida económica se encuentra por el incumplimiento obligado. “El riesgo de contraparte es probablemente la variable más importante en la determinación sobre la existencia y prontitud en que las disrupciones en los mercados se convierten shocks con efectos sistémicos” (Asobancaria).

En cuanto a temas de regulación de mercado y condiciones necesarias para realizar todo tipo de negociaciones , se deben acatar ciertos puntos y características establecidas para permanecer en el mercado de valores; por lo que, es de suma importancia conocer los decretos y leyes que rigen para el mercado, que su desconocimiento o desacato conlleva a intervenciones del regulador o a sanciones por incumplimiento de políticas; para ello, se deben definir dichas exigencias como el decreto 1771 , el Acuerdo de Basilea y Cámara riesgo central de contraparte.

El decreto 1771 tiene como objetivo incrementar la capacidad del patrimonio de los bancos para respaldar sus activos y preservar los ahorros del público. Para esto, se busca que el capital esté compuesto por instrumentos que cumplan con criterios exigentes de permanencia, liquidez y posible absorción de pérdidas. Por tal motivo, la nueva regulación excluye de allí conceptos que riñen con estos estándares, tales como la valoración de activos fijos, el goodwill y los impuestos diferidos netos, entre otros, los cuales elevan artificialmente el patrimonio y pueden generar distorsiones en la ecuación contable.

En cuanto al acuerdo de Basilea III en el mercado en Colombia, implica un cambio importante respecto a lo que se considera capital adecuado y “capital tangible”.

En 2010, el Comité de Basilea para la Supervisión Bancaria estableció nuevas normas para fortalecer el capital bancario, teniendo en cuenta el fracaso de Basilea II en contener adecuadamente la grave crisis financiera global de 2007- 2009. Su objetivo central es robustecer la disponibilidad del capital, incrementando su cantidad por unidad de negocio y aumentando la calidad del mismo. Para las entidades con potencial riesgo sistémico se adoptaron “colchones de liquidez” adicionales, en función de su tamaño y su papel a nivel global (Acuerdo de Basilea, 2012).

Por su parte, la Cámara de Riesgo Central de Contraparte de Colombia S.A. “es la entidad de contrapartida central del mercado de capitales colombiano, provee servicios de compensación y liquidación con contrapartida central para derivados estandarizados sobre activos financieros y sobre “commodities” energéticos y para el NDF FXFW USD/COP a diferentes sistemas de negociación y/o registro” (Banco de la República, 2013).

Al ser contraparte central se interpone en las operaciones aceptadas volviéndose comprador de todo vendedor y vendedor de todo comprador, mitigando el riesgo de contraparte y proveyendo al mercado eficiencias operativas a través de sistemas de administración de riesgo robustos y probados. La Cámara de Riesgo Central de Contraparte de Colombia S.A. – CRCC S.A. “es una entidad bajo la inspección y vigilancia de la Superintendencia Financiera de Colombia S.A., cuyo objetivo principal es contribuir al desarrollo del mercado de capitales, mediante la mitigación del riesgo de contraparte generando transparencia, eficiencias operativas, confianza y seguridad a todos los participantes del mercado y creando valor a sus accionistas” (Cámara de Riesgo).

Después de conocer cuáles son las regulaciones que están sometidas las comisionistas en Colombia, hay que profundizar en un compendio de noticias que dieron lugar a la liquidación e intervención de la AMV y Superfinanciera para Interbolsa; de modo que, esta serie de sucesos llevaron a que el mercado colombiano y en especial el índice se vieran afectados en razón de volumen, precio, rentabilidad, liquidez e imagen. Antes de mencionar algunos de los sucesos presentados en Interbolsa que llevaron a la liquidación de la firma, es importante reseñar sobre uno de los personajes más comprometidos de nombre Alessandro Corridori, quien llegó a realizar negociaciones de la acción de Fabricato por medio de un instrumento de mercado llamado REPOS (La República, 2012).

Para comenzar, cabe recordar que el jueves 15 de noviembre de 2012, se conoció que Corridori vendió su participación en la sociedad Azul & Blanco S. A., según informó la Superintendencia Financiera, “revisado el movimiento accionario de la sociedad Azul & Blanco S. A., pudimos evidenciar que se presentó un cambio accionario en la participación que hasta la fecha radicaba en cabeza del señor Alessandro Corridori, quien cedió el total de su participación a favor de la sociedad Inversiones Isaza Camacho y Compañía” (Parada, 2012). Es así como el caso de Interbolsa comienza a ser divulgado por los medios de comunicación, para llegar al momento en el cual es un hecho la falta de liquidez de la firma comisionista de bolsa. Sin embargo, no se menciona en ningún lado que gran cantidad de dichas situaciones están asociadas a debilidades que pudieron ser prevenidas con un correcto sistema de control interno y toma de decisiones oportunas, para evitar el impase o descalabro financiero al interior de la comisionista.

Ahora, hay que reconocer que antes del escándalo, Interbolsa era considerada la principal comisionista de bolsa de Colombia y alcanzó a manejar el 30% del mercado bursátil. Este dominio llegó a su fin el 1 de Noviembre de 2012, cuando el impago de sus obligaciones Unidad investigativa portafolio (2012, 17 Noviembre). Un año después de la quiebra de proyectar valores, creada por Juan Carlos Ortiz, interbolsa corrió la misma suerte; con el dinero de los clientes de Interbolsa, Corridori comienza a comprar más y más acciones de Fabricato.

La operación se repite durante año y medio, tiempo en el cual adquiere 20% de las acciones de la textilera y se convierte en su mayor accionista. Por esta vía, el inversionista italiano logra conseguir miles de millones de pesos a través de Interbolsa. El negocio empieza a ser replicado a otros clientes interesados en comprar acciones de Fabricato; pero, el castillo comienza a derrumbarse cuando la acción de Fabricato, que pasa de \$ 26 a \$90 en el último año y medio se vuelve tan cara (Pijarán, 2012).

De este modo, la quiebra de interbolsa es solo la punta del iceberg. El declive de este grupo comienza a mostrar que, lo que era al comienzo de un caso de exceso de ambición y desbordado apalancamiento financiero, se ha convertido en un asunto penal por el cual varios protagonistas podrían terminar en la cárcel. La Fiscalía General de la Nación abrió varias investigaciones al respecto, lo mismo que la Contraloría General de la Nación. Esta situación hace ver lo peligroso que resulta ser estos comisionistas de bolsa, en un país donde al parecer no se tienen los medios para controlar y revisar a tiempo, de modo que, termina conllevando a afectaciones en todo el orden económico de un país, que no sólo es una problemática de unos actores específicos, sino que, alcanza otras dimensiones, de manera tal que esto afecta la economía del país, y a todos los ciudadanos de este territorio nacional.

Lo anterior, se puede hallar ante la inacción del contralor normativo de la firma: Alberto Mejía Puentes, quien no solo no cumplió su rol de advertir de irregularidades o riesgos excesivos para la compañía, sino que ya había sido sancionado en el pasado por el Autorregulador del Mercado de Valores (AMV), por incumplir sus obligaciones en otra firma que después también fue intervenida. De manera que, las consecuencias (hasta ahora) de este caso son: la liquidación de Interbolsa en medio de varias irregularidades adicionales al caso con las operaciones repo, el cuestionamiento sobre los mecanismos de control de entes como la Superintendencia Financiera y la AMV, investigaciones por parte de la Fiscalía, Contraloría, y la pérdida de confianza del mercado, que afectó la acción de Interbolsa, Fabricato y el índice IGBC.

A continuación se observan las fuertes variaciones que tuvieron las acciones de Interbolsa y Fabricato, antes y después de la intervención, haciéndose hincapié en su impacto en el índice.

Fuente: Bloomberg, 2013.

En la gráfica se muestra la variación que tuvo la acción de Fabricato durante un periodo de tiempo de un año, donde presentó un declive de su valor en un 137%, tomando datos desde octubre 2012 a febrero 2013, de este se concluye que esta situación se presentó debido a la intervención de entes regulatorios y al pánico generado en el mercado.

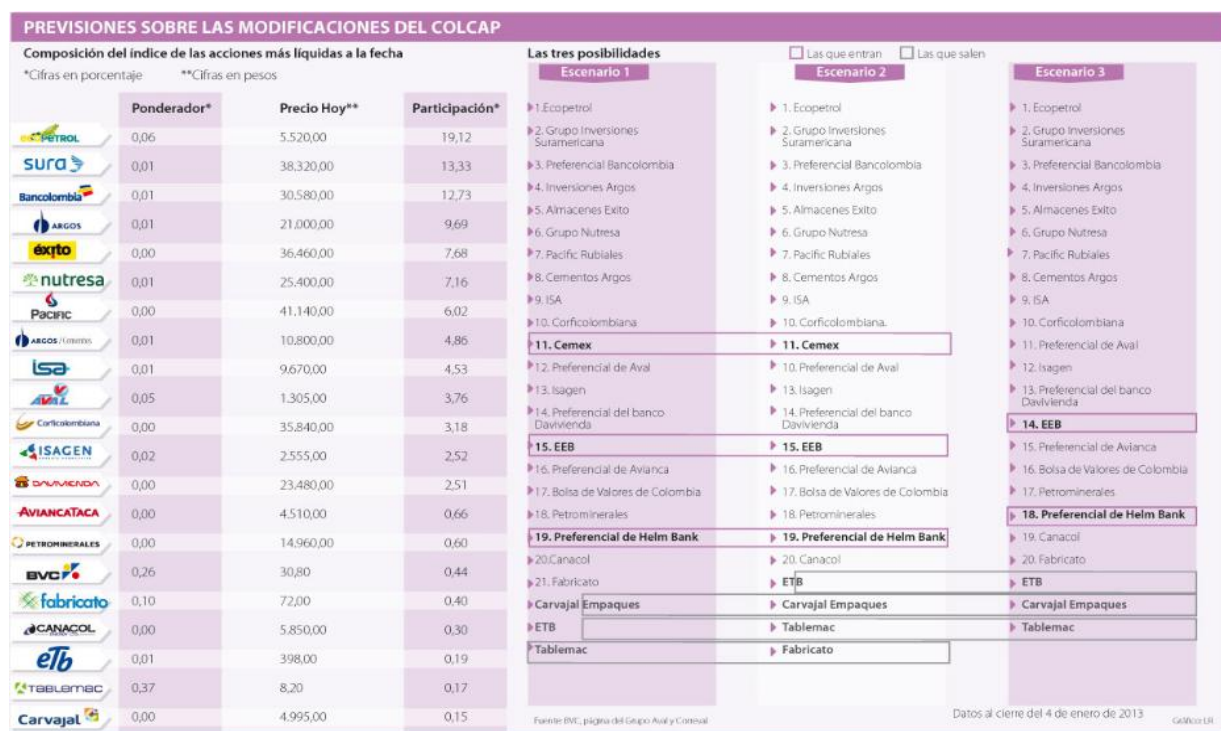

Gráfica 2. Acción Interbolsa.

Fuente: BVC, 2014.

En la gráfica se visualiza el desplome de la acción de Interbolsa frente a la intervención del autor regulador de mercado de valores en la fecha de noviembre del 2012, que conllevó a la disminución de un pequeño porcentaje del indicador BVC.

Gráfica 3. Previsiones sobre las modificaciones del Colcap.

Tomado: Pérez, 2013.

En la gráfica se muestran las acciones más líquidas con alto volumen que se negociaban antes de la crisis de Interbolsa, entre ellas se encontraba la acción de Fabricato, en la cual Interbolsa infló sus precios por medio de las operaciones de repo; se encuentran 3 escenarios donde ubican la acción de Fabricato fuera de la canasta de acciones del

indicador COLCAP, lo cual genera una incertidumbre si la acción seguirá negociando en la bolsa de valores de Colombia.

Luego de observar los diferentes acontecimientos que se generaron a través de la situación de Interbolsa, es necesario determinar los métodos estadísticos y financieros con los cuales se pretende analizar dicha situación en varios momentos y su impacto en el índice Colcap lo largo de la investigación. Aquí se advierte que debido a la dificultad para interpretar la magnitud de la covarianza, suele utilizarse la correlación para medir el grado de movimiento conjunto entre dos variables o la relación lineal entre ambas. La correlación se encuentra entre -1 y 1 y se determina de acuerdo a la siguiente expresión explicado por Lara (2007):

$$\text{Corr}(R_i, R_j) = \rho_{ij} = \text{COV}(R_i, R_j) / \sigma_i \sigma_j$$

El signo positivo en el coeficiente de correlación significa que las dos variables se mueven en la misma dirección, mientras más cercano a la unidad, mayor será el grado de dependencia mutua. El signo negativo indica que las dos variables se mueven en sentidos opuestos. Asimismo, mientras más cercano a cero sea el coeficiente de correlación mayor será el grado de independencia de las variables.

La volatilidad histórica es un método en el que no se hace énfasis en el pasado inmediato, es decir, todas las observaciones tienen el mismo peso específico y el pronóstico está basado en las observaciones históricas. Para el cálculo de la volatilidad se utiliza la misma fórmula de la desviación estándar:

$$A = \sqrt{\sum (r_i - \mu)^2 / (n-1)}$$

Para ellos, se usan métodos paramétricos o no paramétricos para su valoración como varianza, covarianza, correlación y promedios móviles.

5.3 Definición de términos básicos

Autorregulador: entes o entidades de carácter privado que desarrollan y cumplen funciones normativas, de supervisión vigilancia y de disciplina con el objeto de contribuir y ayudar al mantenimiento de la confianza, integridad y transparencia del mercado de valores.

Colcap: indicador que refleja las variaciones de los precios de las 20 acciones más liquidas de la Bolsa de Valores de Colombia (BVC), donde el valor de la Capitalización Bursátil Ajustada de cada compañía determina su nivel de ponderación.

Control Interno: conjunto de áreas funcionales en una empresa y de acciones especializadas en la comunicación y control al interior de la empresa. El sistema de gestión por intermedio de las actividades, afecta a todas las partes de la empresa a través del flujo de efectivo.

Crédito intradia: Crédito concedido por un periodo inferior a un día.

Indicador de rentabilidad: sirve para medir la efectividad de la administración de la empresa u inversión para controlar los costos y gastos y; de esta manera convertir ventas u inversión en utilidad.

Indicador de volumen: el número de acciones que se trasladan en un día, resultado de las fuerzas de la oferta y la demanda. El volumen es un sensor de la posición del mercado.

Índice de precios: serie cronológica de números que indican la variación relativa de los precios de un conjunto de acciones que se cotizan en bolsa, en la que el precio de cada acción es ponderado de acuerdo con su importancia.

Índices del mercado bursátil colombiano: El índice general de la bolsa de valores de Colombia (IGBC) es el indicador bursátil del mercado de acciones colombiano. Refleja el comportamiento promedio de los precios de las acciones en el mercado, ocasionado por la interacción de la oferta y la demanda, producto de las negociaciones de dichas acciones. De manera análoga al IGBC, existen índices específicos por sectores de la economía. Existe un índice de liquidez (i.e. col20) y de capitalización (i.e. colcap), así como también existen índices para los sectores comercial, agrícola, servicios públicos, servicios varios, inversoras, industrial y financiero.

Índice bursátil: Es un indicador de la evolución de un mercado en función del comportamiento de las cotizaciones de los títulos más representativos. Se compone de un conjunto de instrumentos, acciones o deuda, y busca capturar las características y los movimientos de valor de los activos que lo componen.

Índice de solvencia: capacidad de la empresa para atender el pago de todas sus deudas y compromisos especialmente aquellas de largo plazo, riesgo es la incertidumbre sobre esa capacidad, este análisis es importante no solo porque mide la capacidad de la empresa para soportar las deudas, sino que se basa en el endeudamiento y éste es un parámetro importante que no solo afecta la solvencia de la empresa sino la rentabilidad por

la vía del apalancamiento financiero. Sirve para medir el riesgo crediticio, ayuda a la toma de decisiones para el control del dinero en la empresa. Estos indicadores miden la cantidad de recursos obtenidos de terceros para reunir el dinero que financiará la inversión.

Índice de liquidez: indica la disponibilidad de liquidez de que dispone la empresa. La operatividad de la empresa depende de la liquidez que tenga la empresa para cumplir con sus obligaciones financieras, con sus proveedores, con sus empleados, con la capacidad que tenga para renovar su tecnología, para ampliar su capacidad industrial, para adquirir materia prima, etc.

Mercado de capitales: Es un tipo de mercado financiero en los que se ofrecen y demandan fondos o medios de financiación a medio y largo plazo.

Mercado de valores: Conjunto de instituciones y agentes financieros los cuales negocian los distintos tipos de activos (acciones, fondos, obligaciones, etc.) a través de los instrumentos creados específicamente para ello.

Repos: operación con pacto de recompra, es decir, una entidad financiera vende un activo con un pacto de recompra por un precio determinado dentro de un tiempo determinado.

Riesgo: Combinación de la probabilidad de que se produzca un evento y sus consecuencias negativas. Los factores que lo componen son la amenaza y la vulnerabilidad.

5.4 Variables o categorías de análisis

Variables Independientes:

Regulaciones, leyes, decretos o políticas establecidas por la superintendencia financiera o entes externos como el Estado, algunas de ellas: Constitución Nacional, artículo 335; ley 964 de 2005, ley 795 de 2003 y ley 510 de 1999.

Variables dependientes:

Se pueden contemplar las variables de volatilidad, variables de rentabilidad y variables de liquidez.

PROMEDIO MOVIL COLCAP DESPUES DE SITUACION

INTERBOLSA

promedio 30

6. ANÁLISIS DE RESULTADOS

Para determinar qué tan alta fue la afectación en el índice Colcap, de la situación presentada por Interbolsa es su momento coyuntural y su caída en el mercado de valores, es necesario analizar una serie de datos de precio, volumen y variación, con respecto a la correlación que existió entre los índices latinoamericanos y colombianos, en especial el Colcap; de igual forma, tener presente herramientas como promedios móviles, observar la reacción a los movimientos presentados por las acciones o instrumentos involucrados en dicho evento, para lo cual se dará una conclusión a cada una de las gráficas expuestas según los cálculos realizados a lo largo de la investigación, así:

Gráfica 1. *Promedio móvil Colcap antes*

La gráfica muestra las variaciones o movimientos en los precios del índice Colcap antes de que se presentara la intervención a Interbolsa y la posterior liquidación de la firma

comisionista; se observa claramente que en un promedio de 60 días las variaciones no fueron significativas y presentaba una buena estabilidad en precio y a predecir el futuro de dicho precio, lo que lleva a concluir que era una buena fuente de confiabilidad para los inversionistas, ya que no existía una alta incertidumbre durante el periodo de tiempo establecido. (Ver anexo 3).

Gráfica 2. *Promedio móvil Colcap durante*

Esta gráfica evidencia que existió una alteración en el precio del índice finalizando el mes de octubre de 2012 debido a la situación de Interbolsa, y más aun con respecto a la acción de Fabricato, la cual estaba siendo sobrevalorada y en promedios de 5 y 30 días su precio era más alto del esperado por el mercado, lo que nos lleva a concluir que su relación es directa entre Colcap y evento Interbolsa, ya que tuvo una reacción acelerada de precio por alteraciones no comunes del mercado y en específico del índice. (Ver anexo 3)

Gráfica 3. Promedio móvil Colcap después

Al hacer un análisis referente a la situación del precio y su reacción a las alteraciones o sucesos con la firma comisionista Interbolsa, se encuentra que después de la intervención y posterior liquidación el precio del índice recuperó su normalidad y no generó cambios considerables en su precio, lo que servía como un llamado al inversionista a que existía dependencia de los instrumentos financieros o acciones que lo componían, y que llevar capitales a éste no era un fuente segura de inversión o apalancamiento si lo requerían. De allí se puede determinar que la correlación es muy alta y el efecto es directamente proporcional a los movimientos. (Ver anexo 3).

Gráfica 4. Desviación

	COLCAP Index	IPSA Index	SPX Index	IGBC Index	IGBVL Index	MEXBOLD Index	
Media	0,060%	0,038%	0,052%	0,052%	0,066%	0,047%	Mayor rentabilidad
Desviacion Estanda	0,925%	0,980%	1,240%	0,987%	1,513%	1,172%	Mínimo riesgo
Coefficiente variacio	15,50	25,51	23,79	19,06	22,92	25,10	
Varianza	0,00009	0,00010	0,00015	0,00010	0,00023	0,00014	

Si se analiza de manera individual las desviaciones o las correlaciones existentes entre el índice Colcap y los latinoamericanos, sin dejar a un lado un índice referente, como el s&p500, se observa que la varianza para cada uno con respecto a la media no es significativa, lo que hace que esta medida de dispersión no tenga el suficiente peso para determinar que cada uno de los índices en Latinoamérica dependan de las reacciones, movimientos por noticias o coyunturas de mercado como lo sucedido con Interbolsa, lo cual hace concluir que son mercados independientes con variaciones propias de sus mercados, y replican solo internamente otros índices que manejan en cada país, que tenga un mercado de valores estabilizado. (Ver anexo 2).

Igualmente, no existen datos dispersos en cada índice que muestren que los cambios en precio, volumen y rentabilidad desestabilicen los mercados o generen detrimento en las negociaciones. De igual forma, se puede concluir que según los datos estadísticos y cálculos realizados para cada uno de los índices existe poca aversión al riesgo, al igual que no muy altos niveles de rentabilidad, lo cual hace que sean inversiones seguras para perfiles moderados de personas que no quieran exponer de forma completa sus capitales.

Existe una correlación muy débil entre Ipsa y Colcap, ya que es cercano a 0, lo que hace concluir que las variaciones de uno a otro mercado no se ven vulneradas por sucesos de liquidaciones, fusiones, adhesiones u otros tipos de mecanismos que utilicen las empresas para fortalecer su posicionamiento y mayor representación en el mercado de valores (Ver anexo 1).

Este es un índice de referencia mundial que debemos observar muy detenidamente, pero en el caso de Interbolsa y su relacionamiento con el Colcap no da lugar a correlaciones fuertes por los movimientos de sus instrumentos financieros, por el contrario no existe dependencia (Ver anexo 1).

Gráfica 12. IGBA Index

ANÁLISIS DE VARIANZA

	Grados de libertad	Suma de cuadrados	Media cuadrática	F	Valor crítico de F
Regresión	1	0,09720562	0,09720562	9844,63246	0
Residuos	1081	0,01067376	9,874E-06		
Total	1082	0,10787938			

	Coefficientes	Error típico	Estadístico t	Probabilidad	Inferior 95%	Superior 95%	Inferior 95,0%	Superior 95,0%
Intercepción	-9,047E-05	9,5776E-05	-0,9445551	0,34509711	-0,0002784	9,7462E-05	-0,0002784	9,7462E-05
Variable X 1	1,0145915	0,01022566	99,2201212	0	0,99452711	1,0346559	0,99452711	1,0346559

Existe una correlación muy fuerte entre ambos índices IGBC y Colcap, ya que se encuentra dentro del mismo mercado y las alteraciones de uno, se ven directamente intervenidas o asumidas por el otro, uno mide las 20 acciones más representativas y de tamaño negociadas en bolsa y el IGBC incluye un rango más amplio de 38 acciones, donde existen también las inmersas en el Colcap. Es por esto que para un inversionista sus capitales expuestos en los mercados, cualquier alteración hace que pierda valor por sucesos de comisionistas liquidadas como Interbolsa (Ver anexo 1).

Gráfica 13. IGBVL Index
